

# SpiderCool

Automated Coolant Nozzle Systems

SpiderCool has been redesigned!

## Check out these new features & additional benefits

- **Full Performance** – The new SpiderCool has all the capabilities of the original, plus much more. No performance compromises have been made.
- **Compact Size** – fits in tight spaces, can be mounted in various orientations
- **Daisy Chainable** – Up to four nozzles can be “daisy chained electronically” to operate from a single control knob. Multiple nozzles can be mounted to target coolant at tools from multiple directions, which eliminates blindside cutting.
- **Synchronized or Independent Operation** – Daisy chained nozzles can be synchronized to position simultaneously or independently of each other – applies to still positions or sweep cycles
- **Full Programmability** – using serial interface, nozzles can be set in “teach” mode, or can be programmed with direct angles or sweep settings – synchronized or independently
- **Field Reversible** – instantly reconfigure for left or right hand mounting applications
- **Hi-Pressure 1000 P.S.I. Capable** – (requires special high pressure installation kit & nozzle tube)
- **Field Serviceable** – most repairs including servo replacement can be accomplished in only minutes without removing the unit from the machine tool, and with no special tools.
